

Conceptual Modeling: letting designers get their hands *meshy*

Karan Singh

University of Toronto

Conceptual modeling

- What is conceptual modeling?
- Why is it important?
- What is this hands “meshy” business?

Agenda

- Desirable properties of a conceptual modeler
- Existing modeling trends
- Proposed conceptual design system
- Example design tools

Conceptual design desirables

- Abstraction from underlying surface math
- Invite creative exploration
- Allow for precision and constraints
- Workflow mimics traditional design media
- Intuitive and interactive

Related work

- Interactive volumetric sculpting (Galyean & Hughes '91)
- Solid object design by interpreting sketches (Pugh '92)
- Interface for sketching 3D scenes (Zelevnik et al '96)
- Wires (Singh & Fiume '98)

- Exploring interactive curve and surface manipulation using a bend and twist sensitive input strip (Balakrishnan et al '99)
- Haptic sculpting (Sensible Technologies '99)

- Scan data to parametric surfaces (Paraform, Geomagic '99)
- Subdivision surfaces (Alias|wavefront '99)
- Teddy (Igarashi '99)

Existing Paradigms: NURBS/Solids

- Advantages

- Smoothness
- Precision (Analytic shapes)
- Curves (Character, flow lines)

- Limitations

- Patches get in the way (Patch layout, trims)
- Editing paradigms are restricted by topology

Existing Paradigms: Polygon meshes

■ Advantages

- Smooth dense meshes are now feasible
- No restrictions on topology
- More flexible editing paradigms possible
- Conversion to and from physical data is easy

■ Limitations

- Meshes are not intrinsically “smooth”
- Too free (no analytic shapes, hard points)
- No concept of curves or character lines

Ideals of a conceptual modeler

- A mesh creation and sculpting paradigm that
 - Is free-form and exploratory
 - Produces smooth surfaces
 - Has constraints
 - Has curves
 - Allows flexible re-use of data
 - Facilitates hybrid modeling
- A user interface that
 - Is fast and interactive
 - Is simple and uncluttered
 - Captures domain expertise

Agenda

- Desirable properties of a conceptual modeler
- Existing modeling trends
- **Proposed conceptual design system**
- Example design tools

An automotive designers toolbox

- Ideas
- Sketches
- Clay
- Engineering Criteria
- Sweeps
- Steels
- Paint box

- Whats missing? A refinable digital 3D model

Workflow

Import Engineering criteria

Orthographic Sketching

Rough mesh model

Presentation

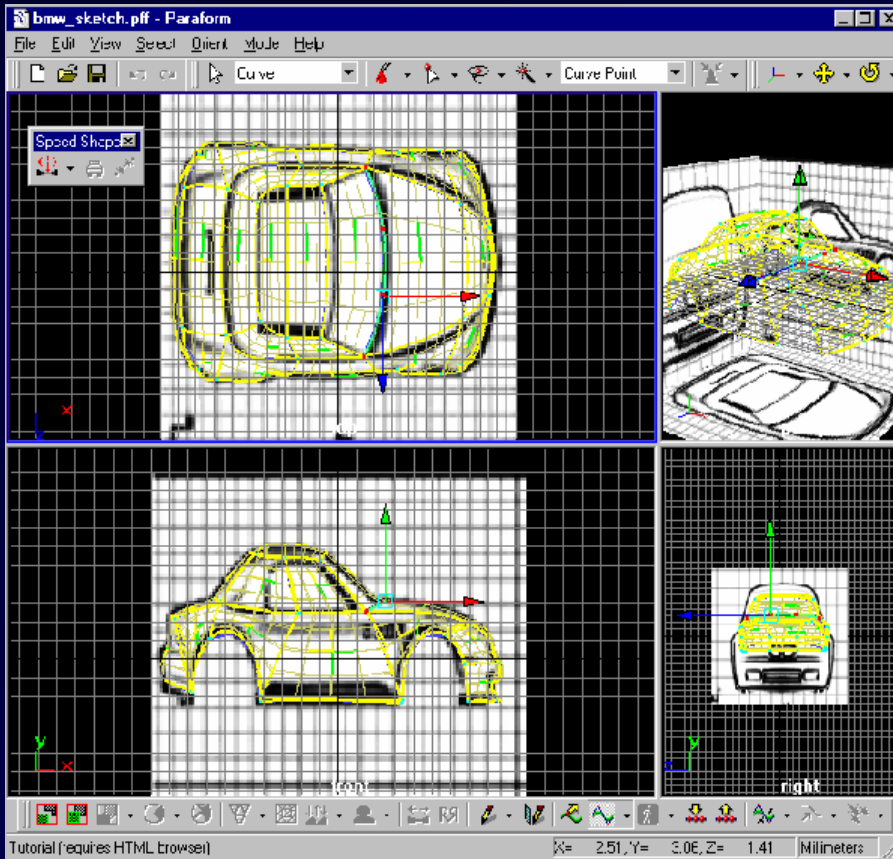

Refine mesh model

Workflow

- Speed Shape
- Shape Refinement
- Presentation

Speed Shape

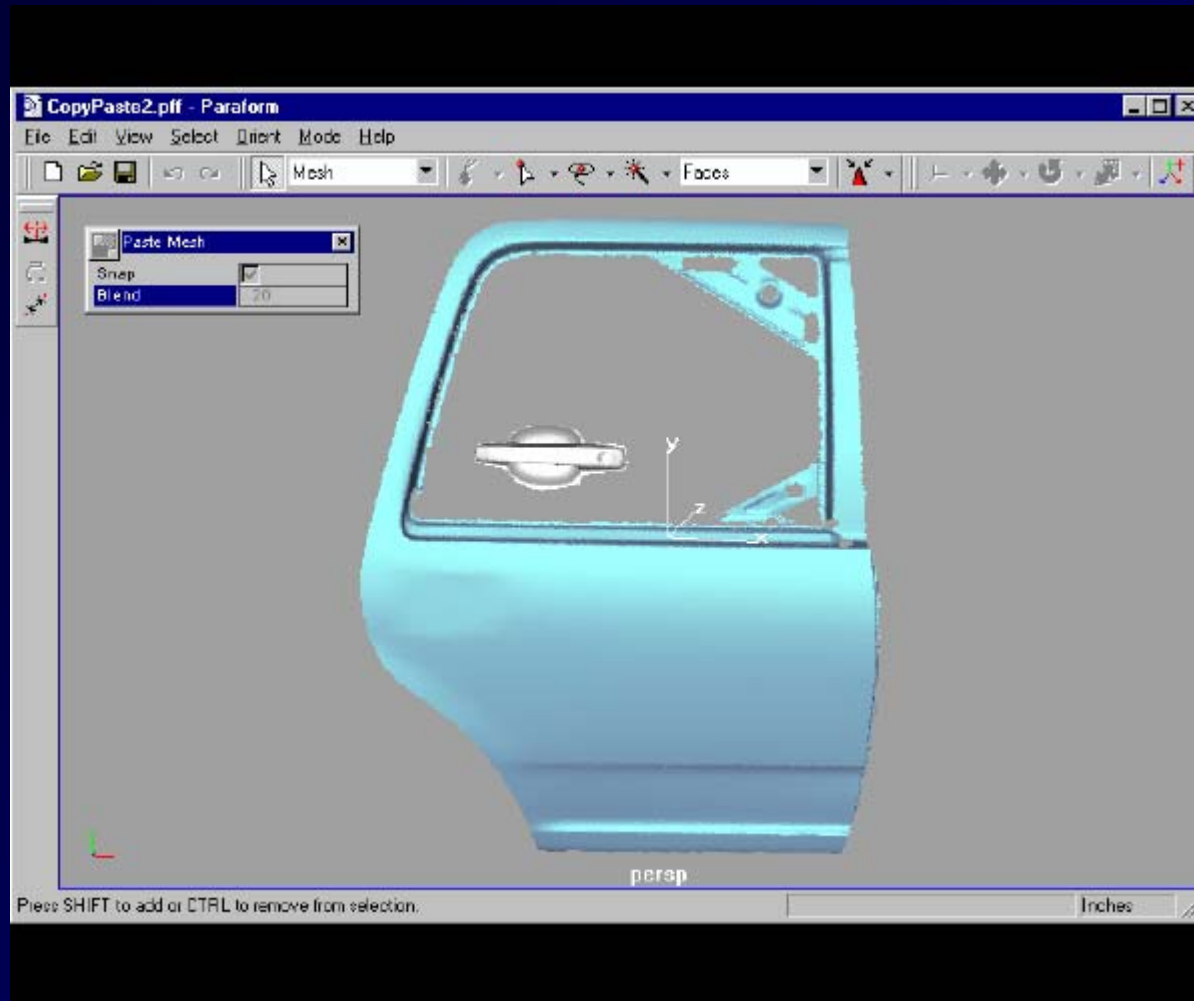

Workflow

- Speed Shape
- Shape Refinement
- Presentation

Shape Refinement

- Cut, copy and paste geometry
- Deformation
- Constraints

Cut, copy and paste geometry

Paste

Hood ornament to be pasted, roughly placed

Paste

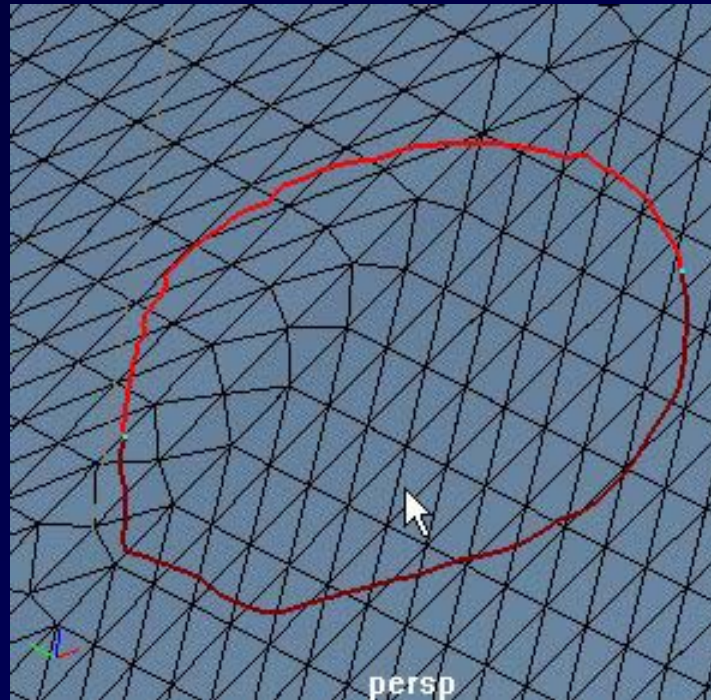

Hole projected onto hood

Paste

Hole aligned with projected hole

Paste

Aligned hole reprojected on hood

Paste

Sectioned hood

Paste

Hood cutout, blend region highlighted

Paste

Holes prior to being stitched

Paste

Pasted hood ornament

Paste

Pasted hood ornament

Shape Refinement

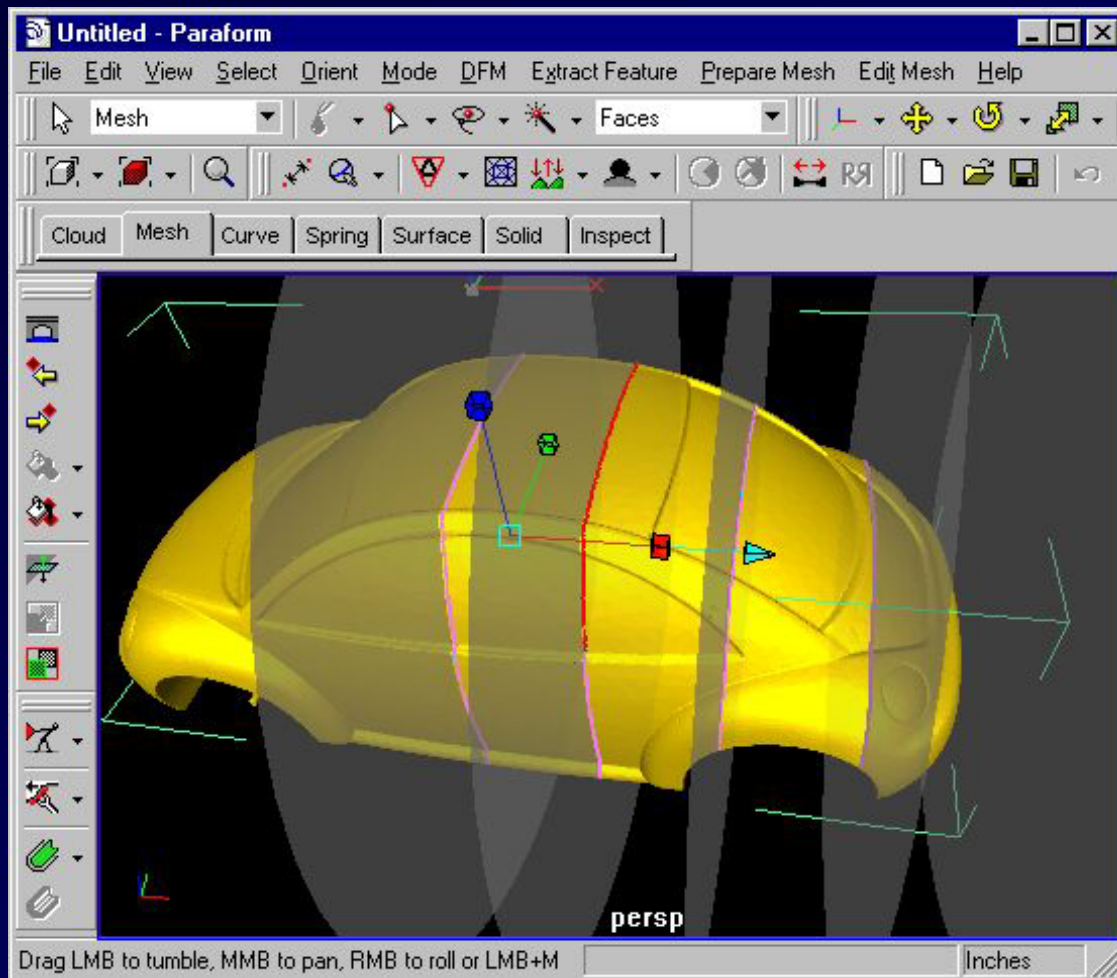

- Cut, copy and paste geometry
- Deformation
- Constraints

Deformation: Global

- Stretch planes and cross section curves
- Inverse Templates

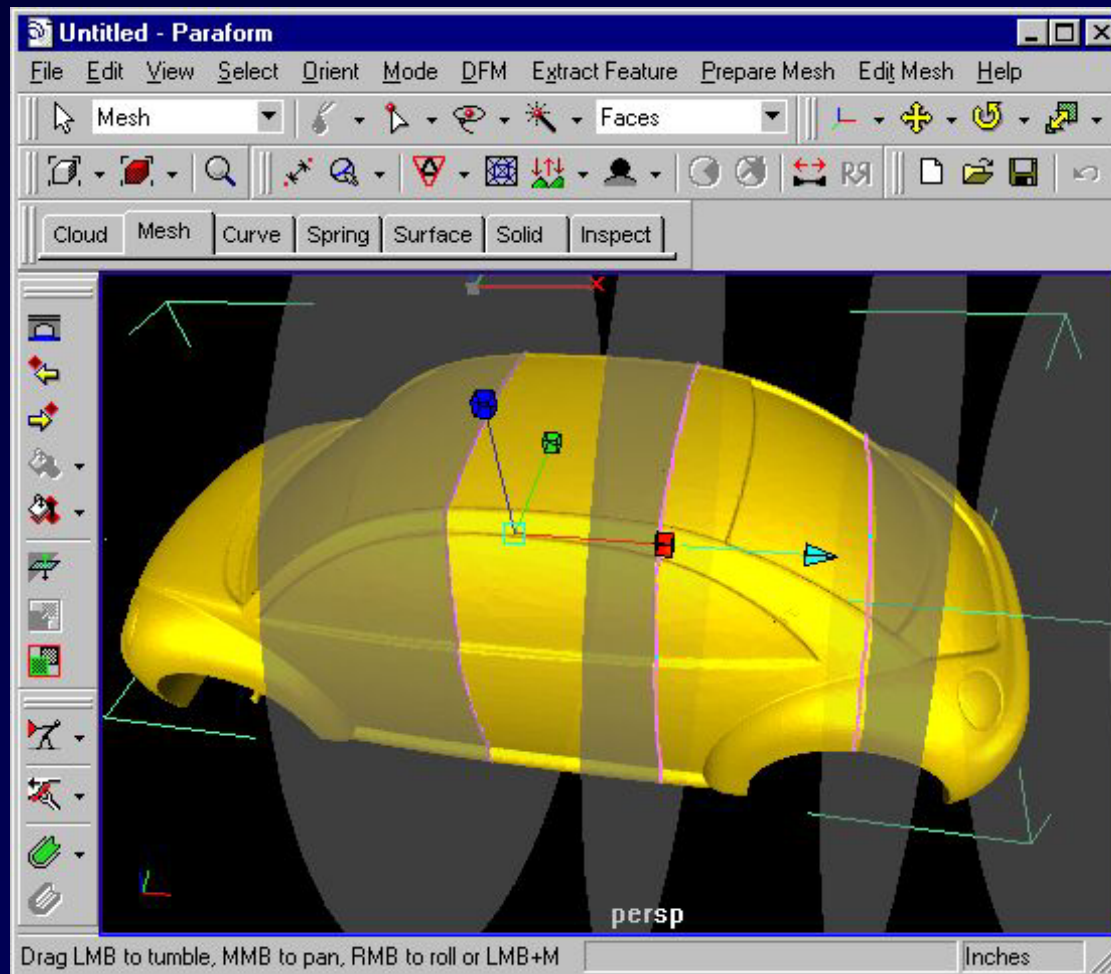

Deformation: Global

Stretch planes and cross section curves

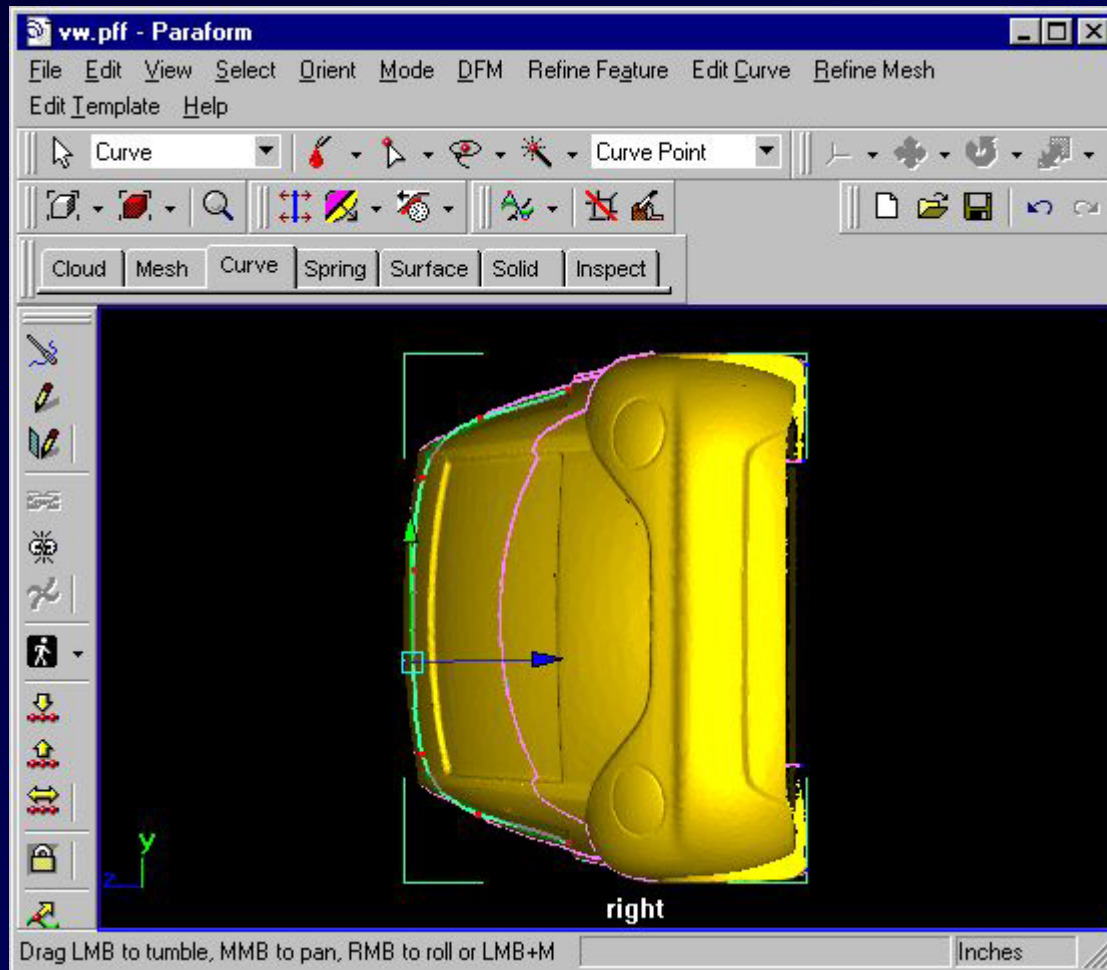

Deformation: Global

A stretch operation

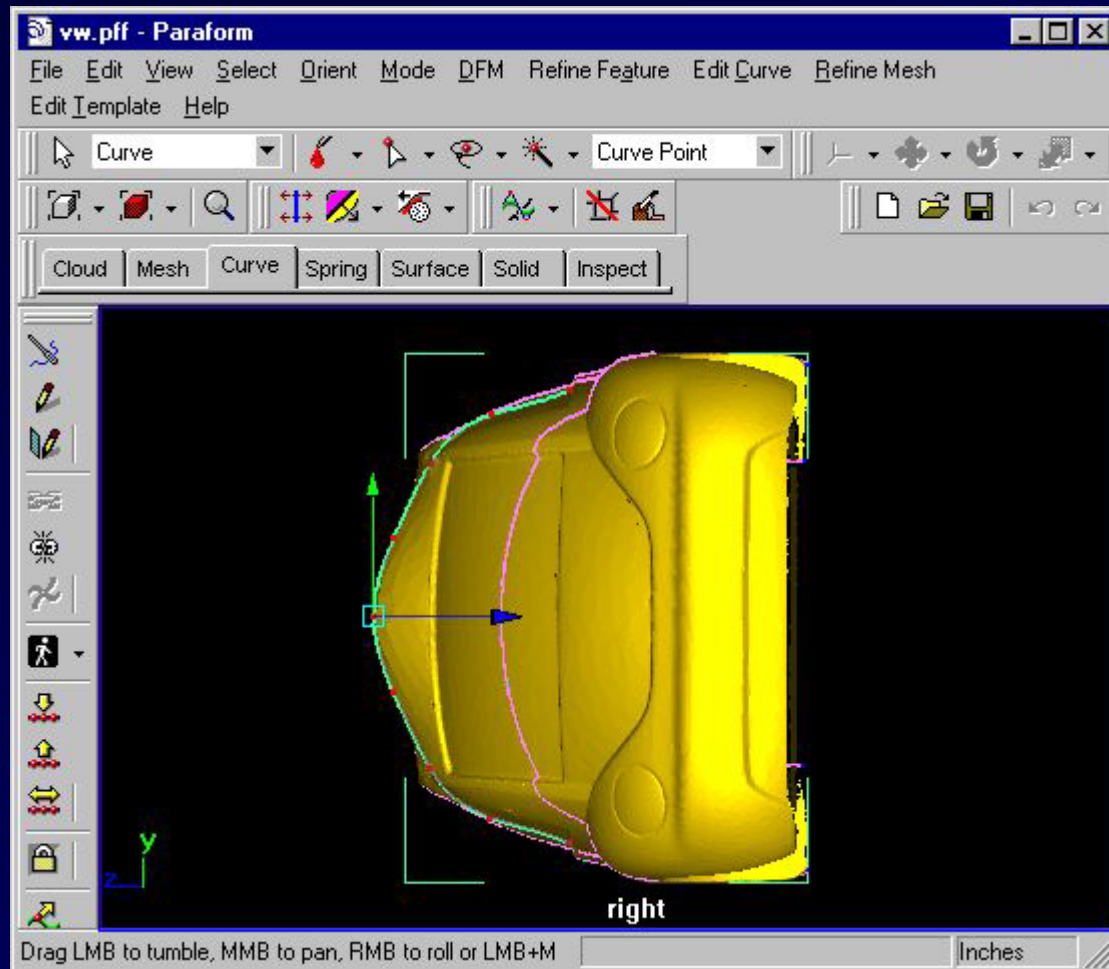

Deformation: Global

Curve based editing: before

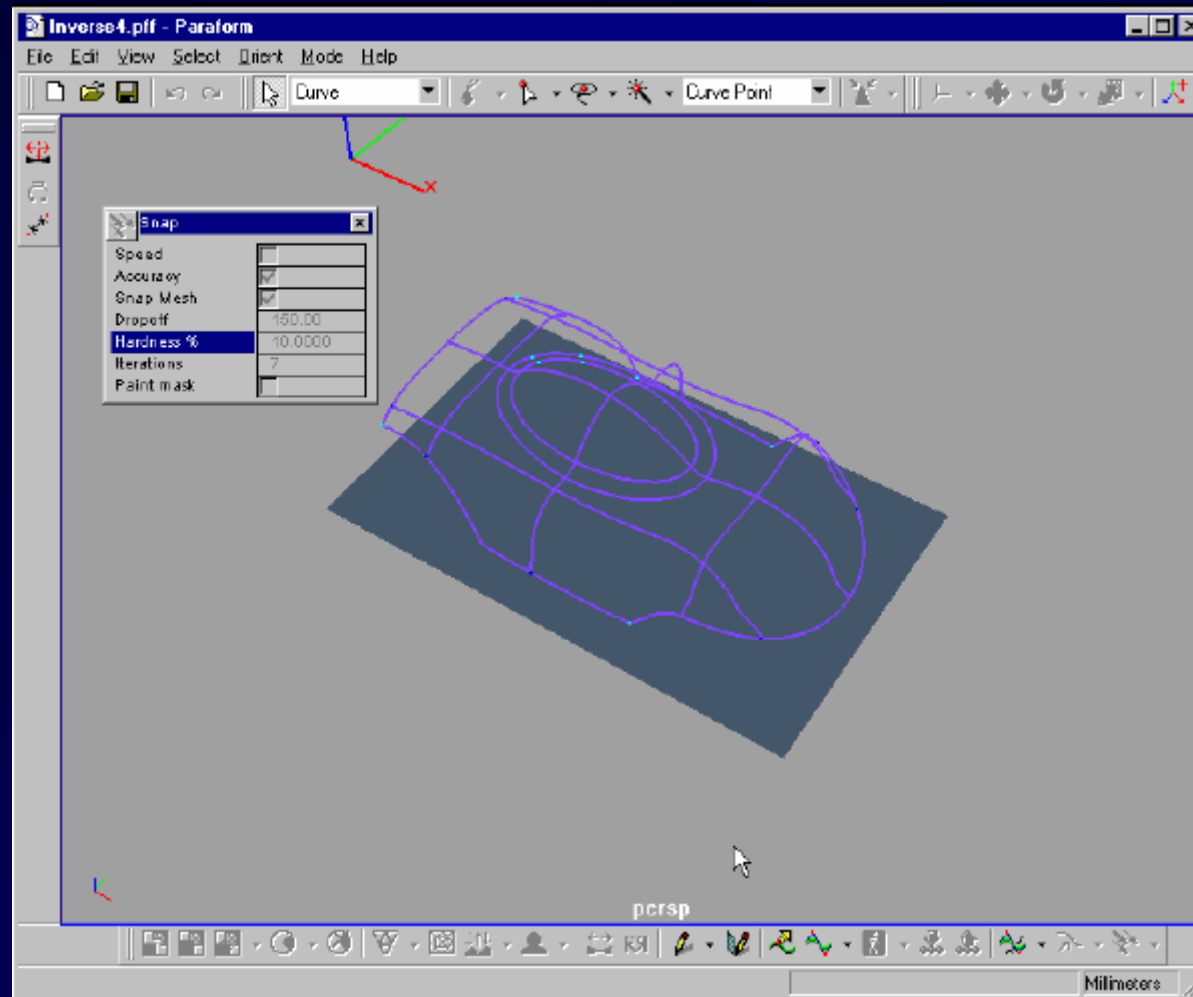

Deformation: Global

Curve based editing: after

Deformation: Inverse Templates

Deformation: Local

Sculpt based 3D output w/ digital “clay” tools

Deformation: Local

Brush based sculpting, smoothing.

Shape Refinement

- Cut, copy and paste geometry
- Deformation
- Constraints

Constraints: Spatial

- Reference frames

Distance constraint

Constraints: Surface based

- Surface features based on a fuzzy selection (rigid, planar, cylindrical, spherical)

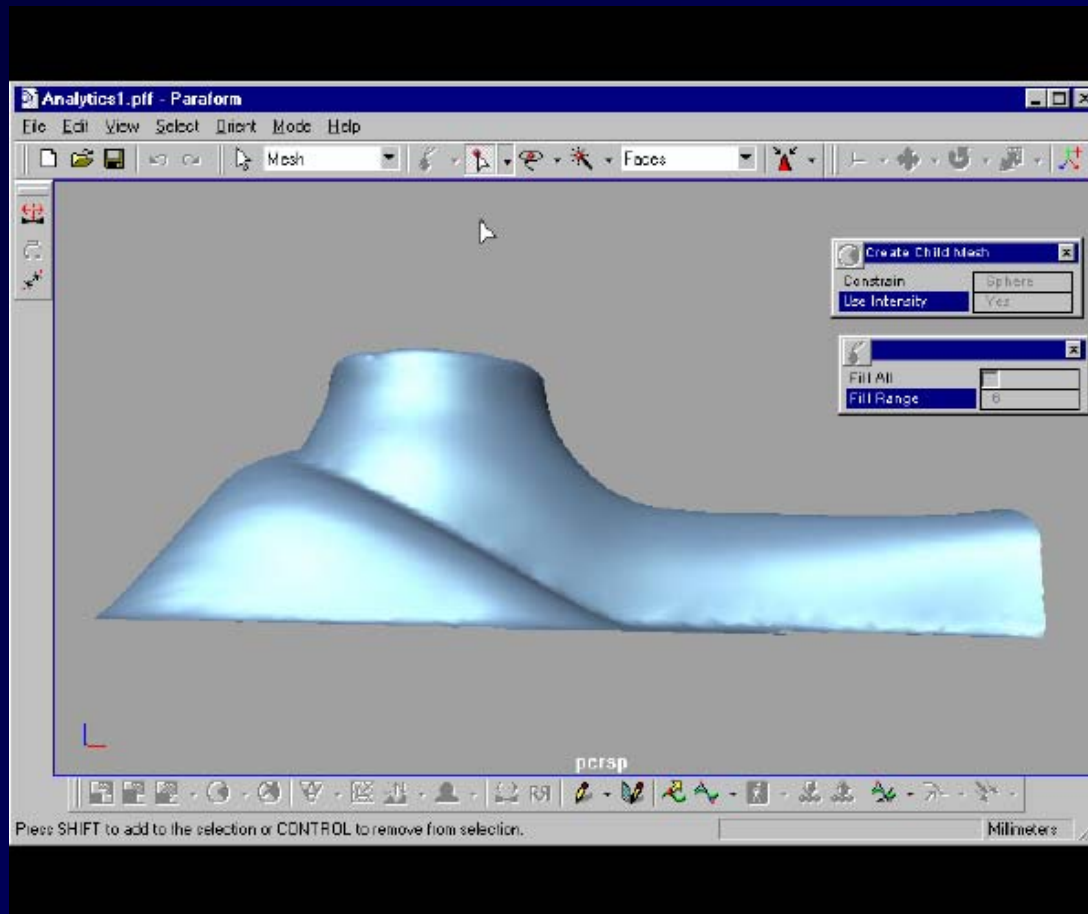

Fuzzy circular feature

Constraints: Surface based

Analytic fitting and deformation

Workflow

- Speed Shape
- Shape Refinement
- **Presentation**

Environments and dynamic maps

Evaluation

- Curvature plots
- Zebra maps
- Reflection lines

Presentation
